

Professional Summary

Computer Science student with a strong interest in software development, web technologies, and problem-solving. Experienced in building projects using HTML, CSS, JavaScript, and Python, including a personal portfolio website. Currently strengthening Java and Data Structures & Algorithms through coding practice and competitive programming platforms such as LeetCode. Interested in Gen AI, hackathons, and practical technology solutions.

Experience: Fresher

Education

Degree / Discipline	Institute / University	CGPA / %	Year
B.E. Computer Science and Engineering	SMVITM, Bantakal, Udupi	8.3	2024-28
Pre-University	MGM PU College	93.66%	2022-24

Projects

VajraYield – Rural Market Intelligence Engine

Hackathon Premier League (HPL) 2026 – SMVITM | 2026 | github.com/tarun215/HPL

- Developed a precision rural market intelligence platform for Coastal Karnataka comparing mandi prices against transport, toll, APMC and spoilage costs to calculate true farmer net realization.
- Engineered a deterministic TypeScript revenue engine incorporating commodity price, quantity, distance, vehicle hire, fuel, tolls, statutory deductions and crop-specific perishability.
- Implemented mandi comparison, commodity price discovery, demand forecasting and cooperative freight pooling to identify higher-return selling strategies.
- Added regional intelligence for Udupi farmer clusters and support for crops including Mattu Gulla, Shankarapura Jasmine and Arecanut.
- Implemented Kannada and Tulu voice briefings using the Web Speech API and added 27 Vitest cases for mathematical accuracy, scenarios, pooling efficiency and input validation.
- Technologies: React, TypeScript, Vite, Tailwind CSS, Supabase, Web Speech API, Vitest.

Parametric AI – Industrial Catalog Data Pipeline

UniHack 2026 – Unilog & Hack2Skill | 2026

- Developed an automated pipeline to transform fragmented distributor feeds and technical PDFs into structured catalog records.
- Used Python, PyMuPDF and Pandas for document extraction and processing; implemented deterministic unit normalization.
- Added visual provenance to trace extracted specifications back to source documents and used FastAPI for high-throughput processing.

Veterinary Clinic Management System

Academic Project | 2025–2026

- Developed a database-driven management system for veterinary clinic records, appointments and patient information.
- Designed ER diagrams, relational schemas and database operations; implemented frontend/backend database connectivity.
- Technologies: HTML, CSS, JavaScript, Python/PHP and MySQL.

Technical Skills

Programming: C, Java, Python, SQL

Web Development: HTML, CSS, JavaScript

Databases: MySQL, SQLite

Data Science / AI: Pandas, NumPy, Machine Learning, Generative AI

Developer Tools: Git, GitHub, VS Code, Google Cloud, Zoho Catalyst

Core CS: Data Structures & Algorithms, DBMS, OOP

Achievements

HPL (Hackathon) — 3rd Runner-Up

Top 400 — Hack2Skill Prompt Wars Virtual Challenge 3 (2026)

Regional Participant — TCS TechBytes 2026 – Sahyadri College of Engineering, Mangaluru (2026)

Participant — UniHack 2026 – Unilog & Hack2Skill (2026)

Round 1 Qualifier — KSP Datathon, organized by Karnataka State Police and Hack2Skill (2026)

Certifications

Generative AI APAC · Participant · Hack2Skill [Verify]

Prompt Wars Virtual Challenge 3 · Top 400 · Hack2Skill · 1500 Prompt Credits Earned [Verify]
